DATA FOR WEEK ENDING:

July 20, 2002

Data represent laboratory testing, not physician diagnoses; data are provided by virology laboratories of the listed institutions, collated by Wisconsin State Laboratory of Hygiene.

Total Number of Viral Specimens Positive / Tested by Specimens Source:	Respiratory	CNS	Enteric	Eye	Other
(excluding CMV, HSV, VZV, Rota and Adeno 40/41)	11 / 89	1 / 20	2/20	0/4	0 / 26

REPORTING	NU	NUMBER OF VIRAL POSITIVES BY AGENT & (SPECIMEN SOURCE)															NUMBER

^{*} Childrens Hospital reported that all three of their rhinoviruses were recovered from the same patient.

^{*} Medical Science Laboratories reported that the respiratory enterovirus was an Echovirus 7.

^{*} Enteroviruses are being detected only sporadically in Wisconsin, as we continue the "in-between" season for virology.

^{*} Approximately 12% of respiratory specimens were reported positive this week; 3% for parainfluenza viruses, 7% for rhinoviruses, 1% for adenoviruses and 0% for RSV, influenza A and influenza B. There were **no** positive rotavirus specimens.

^{*} The Milwaukee Health Department Laboratory reports that they have identified the following enteroviruses in 2002: two Echovirus 30 and one each of Echoviruses 3, 7, 9, 18, and Coxsackieviruses A9, B1, B2, B3, B5. The WSLH has identified one Coxsackievirus B3, three Echovirus 30 (all from same patient), and three Echovirus 6 (all from CSF tissue culture isolates received from Marshfield Laboratories and Bellin Memorial Hospital).
